SUMMARY REPORT
ON
THE SIZE AND STRUCTURE
OF
THE PUBLIC SECTOR MARKET

1979

This report was commissioned by the Minister of Supply and Services in response to recommendations put forward at the Federal-Provincial Conference of Ministers of Public Works and Supply held in St. John's, Newfoundland in September 1981.

The study was jointly funded by the Government of Canada and the Governments of Ontario, Manitoba, Saskatchewan and New Brunswick.

ACKNOWLEDGEMENT

A number of individuals have participated in the study on "THE SIZE AND STRUCTURE OF THE PUBLIC SECTOR MARKET, 1979". DSS would like to acknowledge their efforts in the development of this report. These people include:

From the Ministry of Industry and Trade, Government of Ontario: D.F. Taylor.

From the Department of Industry, Trade and Commerce and Regional Economic Expansion: B.W. Holmes.

From Statistics Canada: J. Diena, K. Lal, N. Miller and P.S.K. Murty.

In this report, interpretation of data is the sole responsibility of the Department of Supply and Services.

VI DEFINITIONS AND NOTES

SUMMARY REPORT ON THE SIZE AND STRUCTURE OF THE PUBLIC SECTOR MARKET 1979

I PURPOSE AND SCOPE

This study deals with the size and structure of the public sector market for the calendar year 1979. This market covers the procurement of goods and services of the three levels of governments (including hospitals), government business enterprises and universities.

The major aims of this work have been:

(a) to gather, compile and structure the data available in this area, and

(b) to thoroughly examine the results in terms of demand for and sources of supply of public sector goods and services.

In particular, the following points are discussed:

- The type of goods and services consumed by public sector within the provinces.
- The provincial distribution of this market.
- The foreign content of public sector purchases.
- The impact of the public sector market on employment.
- The provincial ability to supply this market.
- The provincial share of this market.

---

* Any question regarding this report should be addressed to Mr. Sami Sourani, Commercial Supply Management Branch, Supply Management Sector, Department of Supply and Services, Place du Portage III, Hull, Quebec, K1A 0S5. He can be reached at telephone number (819) 997-7473.

II SUMMARY OF RESULTS

1. In 1979, the public sector purchased goods and services for $43.5 billions (excluding salaries and wages paid to its own employees).

2. Public sector categories that spent these funds were:

	$Billions	% of Total
Federal Government	5.6	12.9
Provincial Governments	8.0	18.5
Local Governments	5.6	12.9
Hospitals	1.9	4.3
Universities	0.8	1.7
Fed. Govt Enterprises	8.6	19.7
Prov. Govts Enterprises	10.8	24.8
Local Govts Enterprises	2.2	5.2
TOTAL	43.5	100.0

3. These funds were spent for purchases in:

	$Billions	% of Total
Newfoundland	0.8	1.9
Prince Edward Island	0.2	0.4
Nova Scotia	2.1	4.8
New Brunswick	1.4	3.2
Quebec	9.5	21.8
Ontario	14.9	34.1
Manitoba	3.7	8.6
Saskatchewan	2.0	4.5
Alberta	3.8	8.8
British Columbia	4.8	11.1
Yukon & NWT	0.3	0.8
TOTAL	43.5	100.0

4. The industry sectors that supplied the public sector market were:

	$Billions	% of Total
Service Industry	21.4	49.2
Manufacturing Industry	18.7	43.0
Primary Industry	3.4	7.8
TOTAL	43.5	100.0

5. The goods and services were produced by almost all classes of industries and were supplied from domestic and foreign sources, as follows:

	$Billions	% of Total
Domestic Sources	36.1	83.0
Direct Imports	7.4	17.0
TOTAL	43.5	100.0

6. By industry sector, the direct imports of $7.4 billions are distributed as follows:

	$Billions	% of Total
Primary Industry	0.8	10.8
Manufacturing Industry	5.7	77.0
Service Industry	0.9	12.2
TOTAL	7.4	100.0

7. In addition to the direct imports of $7.4 billions, domestic goods and services include the import component in the form of imported inputs of raw materials and services. This component amounted to $5.5 billions and together with the direct imports make up the foreign component totalling $12.9 billions or 30% of the public sector market. In other words, for every dollar spent by the public sector,

    30¢ pays for foreign content, and
    70¢ pays for Canadian content.

8. By industry sector, the foreign content in every dollar spent was 49¢ in the manufacturing industries, 24¢ in the primary industries and 13¢ in the services industries.

9. By level of technology, the foreign content for every dollar spent is

    57¢ in high technology industry, and
    34¢ in low technology industry.

10. The public sector purchases of manufactured goods are concentrated in a few industries. Goods for the value of $6.7 billions (or 36% of total $18.7 billions) were supplied by five out of 120 industry classes, as follows:

	$Billions	% of Total
Petroleum Refineries	2.3	12.3
Misc. Machinery & Equip.	1.3	7.0
Printing & Publishing	1.2	6.4
Electrical Equip. Inds.	1.0	5.3
Iron & Steel Mills	0.9	4.8
SUB-TOTAL	6.7	35.8
Others 115 Classes	12.0	64.2
TOTAL	18.7	100.0

11. The domestic component of this market ($36.1 billions) generated or maintained about 1.03 million jobs. It is estimated that nearly 190,000 jobs were lost by import.

12. Because of the importance of this special study on the public sector market it is recommended that this type of report be prepared on a continuous basis, once every two years, in order to provide data for suppliers to help them comply with the requirements of the public sector.

    It is also recommended that studies on the micro level be conducted for cases of import replacement and industrial development.

III ANALYSIS *

1. THE MARKET SIZE: CHART 1 *

In 1979, the public sector market reached $43.5 billions. This value was derived as follows:

	$Billions	Included are:
Total Expenditures	111.5	Goods, services, primary inputs
Less: Primary Inputs	67.3	Labour expenses, indirect taxes, and other operating surplus
Equals: Pub. Sector Market	44.2	
Less: Unallocated to industries	0.7	Non-competitive and non-allocated imports
Equals: Pub. Sector Market Analysed in this Report	43.5	

In the complete report, the data are displayed in summary and detailed tables in order to comply with the level of requirements of different users.

2. PUBLIC SECTOR: TABLE 1

The public sector market covers a large number of elements: all federal departments from coast to coast, the provincial governments and boards of education, all hospitals, all local governments agencies, universities in all provinces, and business enterprises of the three levels of governments. These numerous elements were grouped under eight major categories as follows:

	$Billions	% of Total
GOVERNMENT SECTOR:		
Federal Government	5.6	12.9
Provincial Governments	8.0	18.5
Local Governments	5.6	12.9
Hospitals	1.9	4.3
UNIVERSITIES	0.8	1.7
GOVERNMENT ENTREPRISES:		
Federal	8.6	19.7
Provincial	10.8	24.8
Local	2.2	5.2
TOTAL	43.5	100.0

* References are provided throughout the report to tables and charts that are not attached to this summary.

3. PROVINCIAL SHARE OF THE PUBLIC SECTOR MARKET: TABLES 2(a) - 2(d)

The public sector purchased goods and services valued at $43.5 billions in all provinces and territories. The provincial distribution is as follows:

	$Billions	% of Total
Newfoundland	0.8	1.9
Prince Edward Island	0.2	0.4
Nova Scotia	2.1	4.8
New Brunswick	1.4	3.2
Quebec	9.5	21.8
Ontario	14.9	34.1
Manitoba	3.7	8.6
Saskatchewan	2.0	4.5
Alberta	3.8	8.8
British Columbia	4.8	11.1
Yukon & NWT	0.3	0.8
TOTAL	43.5	100.0

4. INDUSTRY SECTORS: TABLES 3(a) - 3(c)

This section deals with what was purchased by each of the 8 public sector categories in each province. The $43.5 billions are thus broken down by 163 classes of industry and are sorted further by the eight public sector categories within the provinces. However, to give a bird's eye view of these data, all industry classes are grouped into 3 major sectors, as shown below:

	$Billions	% of Total
Primary Industry	3.4	7.8
Manufacturing Industry	18.7	43.0
Service Industry	21.4	49.2
TOTAL	43.5	100.0

4(a) Primary Industry: Tables 3(a) and 3(c)

The public sector spent $3.4 billions on goods produced by this industry which consists of agriculture, forestry, fishing, trapping and hunting and mining. Of this total, $3.3 billions (97%) were spent on mining ($1.9 billions) and on agriculture ($1.4 billions).

4(b) Manufacturing Industry: Tables 3(a) - 3(d)

The public sector spent $18.7 billions on manufactured goods; of which, more than 50% were spent by the federal government ($3.7 billions) and the provincial government enterprises ($6.4 billions).

Details are provided in table 3(d) showing a breakdown of the $18.7 billions by 120 industry classes which are sorted fur her by the public sector 8 categories within each province. To summarize these details, these 120 classes are compiled by 20 groups; of which 5 groups accounted for 54.5% of the $18.7 billions spent; as shown below:

	$Billions	% of Total
1. Petroleum and Coal	2.4	12.8
2. Electrical Products	2.3	12.3
3. Transportation Equip.	2.1	11.2
4. Metal Fabricating Inds.	1.8	9.6
5. Machinery Industries	1.6	8.6
SUB-TOTAL	10.2	54.5
Others - 15 Groups	8.5	45.5
TOTAL	18.7	100.0

4(c) Service Industry: Tables 3(a), 3(e)

The public sector spent $21.4 billions on services, of which nearly 60% are spent by three categories:

	$Billions
Provincial Governments	6.1
Provincial Government enterprises	3.5
Federal Government	3.2

Details on the type of services are shown in table 3(e), by allocating the $21.4 billions to 37 industry classes for each of the public sector 8 categories within each province. They are also summarized under 5 groups in table 3(e). This table shows that nearly 75% of total $21.4 billions is concentrated in 2 groups, as follows:

	$Billions	% of Total
1. Community, Business and Personal Services	8.8	41.1
2. Transportation, Communications, and Other Utilities	7.2	33.7
SUB-TOTAL	16.0	74.8
Others - 3 Groups	5.4	25.2
TOTAL	21.4	100.0

5. FOREIGN CONTENT

For the purpose of this study, FOREIGN CONTENT is defined as direct and indirect imports.

Direct imports consist of goods and services that are purchased offshore.

Indirect imports are the foreign inputs of materials and services that were used in the process of producing domestic goods and services.

5(a) Direct Imports: Tables 4(a) - 4(b)

The direct imports of this market amounted to $7.4 billions, of which $5.3 billions (or 72%) were imported by three of the 8 categories as follows:

	$Billions
Provincial Government Enterprises	2.6
Federal Government Enterprises	1.5
Federal Government	1.2
TOTAL	5.3

The $7.4 billions direct imports are distributed by industry sector as follows:

	$Billions	% of Total
Primary Industry	0.8	10.8
Manufacturing Industry	5.7	77.0
Service Industry	0.9	12.2
TOTAL	7.4	100.0

As manufactured goods have the highest import component in the public sector market, further details are displayed in table 4(b). Accordingly, the expenditures on manufactured goods ($18.7 billions) have been classified by 20 industry groups (SIC classification), showing the domestic source and the direct import content within each group. In 10 of these 20 groups, the import content exceeded 25% of total expenditures in that group. Selected examples are shown below:

	TOTAL EXPENDITURES $MILLIONS	DIRECT IMPORT: AMOUNT $MILLIONS	% of Total
1. Machinery Industries	1,666	1,037	62.3
2. Transportation Equipment	2,147	1,209	56.3
3. Misc. Manufacturing Inds.	746	419	56.2
4. Rubber and Plastic Inds.	365	125	34.1
5. Electrical Products Inds.	2,308	777	33.7
6. Chemicals and Chemical Products	1,276	370	29.0
7. Metal Fabricating Industries	1,791	460	25.7
8. Primary Metal Industries	1,274	327	25.7
SUB-TOTAL	11,573	4,724	40.8
OTHERS 12 GROUPS	7,146	1,037	14.5
TOTAL	18,719	5,761	30.5

The direct imports ($7.4 billions) of the public sector market is compared to the total imports to Canada during 1979. This comparison puts the public sector's share at 11% of total imports of $69.2 billions. The public sector's share for each industry sector is as follows:

INDUSTRY SECTOR	OVERALL IMPORT	PUBLIC SECTOR IMPORT	
		AMOUNT	% OF OVERALL IMPORT
	$BILLIONS		%
Primary	8.6	0.8	9.3
Manufacturing	56.1	5.7	10.2
Service	4.5	0.9	20.0
TOTAL	69.2	7.4	10.7

This comparison shows the significance of the public sector to the overall imports.

Details by industry classes are provided in tables 5(a) to 5(f).

5(b) Indirect Imports: Tables 6(a) - 6(g)

Domestically produced goods could include, among other things, some imported inputs in the form of raw materials and parts. Imported inputs have been estimated using import multipliers of the Input-Output OPEN MODEL of Statistics Canada. In this section direct imports were calculated for all industry classes and are shown in tables 6(a) to 6(c). These indirect imports and the direct imports discussed in section 5(a) above make up the foreign content of the public sector market. The foreign content of this market is calculated below:

	TOTAL PUBLIC SECTOR EXPENDITURES			
	AMOUNT		% OF TOTAL	
	$Billions			
TOTAL PUBLIC SECTOR MARKET		43.5		100.0
ESTIMATED FOREIGN CONTENT				
Direct import	$7.4		17.0	
Indirect import	5.5	12.9	12.7	29.7
ESTIMATED CANADIAN CONTENT		30.6		70.3

Accordingly, the value of estimated foreign content at $12.9 billions accounted for 30% of the public sector market; the remaining $30.6 billions (70%) is the Canadian content. To state it differently, a dollar spent by the public sector consists of:

30¢ foreign content and
70¢ Canadian content.

By industry sector, the estimated foreign content and the estimated Canadian content for every dollar spent, are as follows:

INDUSTRY SECTOR	ONE $ SPENT BY THE PUBLIC SECTOR	
	ESTIMATED FOREIGN CONTENT	ESTIMATED CANADIAN CONTENT
	¢	¢
Primary	24	76
Manufacturing	49	51
Service	13	87
TOTAL	30	70

The manufacturing industry has the highest level of foreign content in comparison to the other two sectors.

This level is even higher for some industry groups within this sector. The following are some examples:

INDUSTRY GROUPS	ONE $ SPENT BY THE PUBLIC SECTOR	
	ESTIMATED FOREIGN CONTENT	ESTIMATED CANADIAN CONTENT
	¢	¢
Machinery Industries	73	27
Transportation Equipment	73	27
Miscellaneous Manufacturing Industry	68	32
Textile	60	40
Leather Industry	55	45
Rubber and Plastic Products	52	48
Electrical Products Industry	49	51

By level of technology, estimated foreign content is very large in high technology goods. It should be noted that the public sector purchased goods from this industry worth $12.0 billions or 64% of total purchases of manufactured goods. Details about foreign content by industry classes are given in tables 6(f) and 6(g), and summarized below.

LEVEL OF TECHNOLOGY *	ONE $ SPENT BY THE PUBLIC SECTOR	
	ESTIMATED FOREIGN CONTENT	ESTIMATED CANADIAN CONTENT
	¢	¢
High Technology *	57	43
Low Technology	34	66
TOTAL	49	51

6. IMPACT OF THE PUBLIC SECTOR MARKET ON EMPLOYMENT: TABLES 7(a) and 7(b)

The analysis of this section is based on the INPUT-OUTPUT OPEN MODEL** of Statistics Canada. Accordingly, multiplier coefficients were used to estimate the direct and indirect employment generated by the public sector expenditures of the $43.5 billions.

Direct employment is generated from producing the final goods and services which were bought by the public sector, and indirect employment represents jobs generated in various industries which supplied inputs at various stages of production.

---

* The term high technology industry in this report is based on the definition used by the Science Council study: "Uncertain Prospects: Canadian Manufacturing Industries, 1971-1977".

** Explanations about the INPUT-OUTPUT OPEN MODEL are found in Statistics Canada's Catalogue 15-201.

Accordingly, if the total $43.5 billions were spent on goods and services produced in Canada, it would have generated or maintained 855,023 direct jobs and 363,710 indirect jobs for a total of 1,218,733. Because of import, 186,686 direct and indirect jobs are lost, leaving 1,032,047 jobs (726,781 direct and 305,266 indirect jobs) that were generated by purchases of domestically produced goods.

On average, $33,942 of public sector purchasing could generate or maintain one direct job and 0.4 of an indirect job for a total of 1.4 jobs. The results are summarized on the following page.

To state it differently, every $1.0 million of public sector final demand for goods and related services can generate or maintain 20 direct jobs and 10 indirect jobs for a total of 30 jobs.

Table 7(b) provides a breakdown by 20 SIC groups of the total employment generated or maintained in the manufacturing industry. The two tables: 7(a) and 7(b) also estimate the loss in employment that resulted from buying offshore goods.

7. THE MESSAGE OF THIS REPORT

The analysis so far reveals the following important features of the public sector market:

- It is a large and well established market.
- Goods and services are purchased from all industries.
- Public funds are spent in all provinces and territories.
- This market is highly penetrated by imports.

Given the above characteristics, it is possible to select industry classes according to particular objectives. Thus, these data can be used to identify industries for import replacement and industrial expansion. Examples of possible areas of import replacement studies are on the following page.

Because these industry classes are broad and cover a wide range of goods, imports studies on the micro level may be required to serve the particular objectives of users of this report.

Details by industry classes are provided in tables 6(c) to 6(e).

EMPLOYMENT GENERATED/MAINTAINED BY THE PUBLIC SECTOR MARKET, 1979

INDUSTRY SECTOR	PUBL. SEC. EXPEND. ON CANADIAN GOODS/SERV.	EMPLOYMENT*			EXPEND. PER ONE JOB	SPIN-OFF EFFECT		
		Direct	Indirect	Total		Direct	Indirect	Total
		No. of Jobs				No. of Jobs		
	$ Billions				$			
Primary	2.3	47,798	27,337	75,135	31,277	1	0.6	1.6
Manufacturing	12.7	156,298	77,042	233,340	54,555	1	0.5	1.5
Services	20.0	522,685	200,887	723,572	27,572	1	0.4	1.4
TOTAL	35.0	726,781	305,266	1,032,047	33,942	1	0.4	1.4

* Direct and indirect jobs are estimated by using coefficients of INPUT/OUTPUT OPEN MODEL provided by the INPUT/OUTPUT DIVISION OF STATISTICS CANADA. In this model, direct jobs result from producing the goods and services which were bought by the public sector. Indirect jobs represent the jobs generated in various industries which supplied the inputs at various stages of production.

This calculation was made by Statistics Canada's Input/Output Division on the basis of the final demand which was obtained by removing from the total public sector expenditures of $44.2 billions, three leakages totalled $1.3 billions: import, government goods and services and withdrawal from inventories.

INDUSTRY CLASSES IDENTIFIED FOR IMPORTS REPLACEMENT STUDIES
1979

INDUSTRY CLASSES	PUBLIC SECTOR PURCHASES				
	TOTAL	DOMESTIC SOURCES		DIRECT IMPORTS	
		AMOUNT	% OF TOTAL	AMOUNT	% OF TOTAL
	$Millions	$Millions	%	$Millions	%
Misc. Mach. & Equip.	1,334	548	41.1	78o	58.9
Electrical Industrial Equip.	999	601	60.2	398	39.8
Aircraft and Parts	855	242	28.2	613	71.8
Communications Equipment	565	359	63.5	206	36.5
Scientific and Professional Equipment	533	176	33.0	357	67.0
Office and Store Machinery	269	51	9.1	217	90.9

IV OVERVIEW AND CONCLUSIONS

This study attempted to put together the public sector demand for and supply of goods and services.

The sector is composed of several elements, but for the purpose of this study they were grouped under 8 categories. These categories cover the federal government with all its departments from coast to coast, the provincial governments and boards of education in each province, the large number of hospitals all over the country, all municipalities and agencies of local government, and the government business establishments of the three levels of governments. All in all, these several bodies have their own programs and objectives that determine their requirements for goods and services. The common factor among them is that they are using public sector funds to purchase goods and services to support their programs that serve the public.

On the supply side, there are over 30,000 manufacturing establishments in Canada in addition to several thousands of wholesalers, retailers, contractors, consultants and offshore suppliers that compete to win a piece of this market.

Because of the large size and scattered nature of this market any piece of information is important to suppliers who wish to compete effectively for business. It has been the purpose of this project to provide users with background data which can help in joining together the two sides of the market. It can also be used to stimulate discussion about public sector co-operative procurement, import replacement, industrial and regional development. It is felt that suppliers could establish a pattern about this market if data are made public on a continuous basis, at least once every two years. Furthermore, studies on the micro level could be required to support import replacement or industrial development for specific commodities.

V PROVINCIAL ANALYSIS

1. PROVINCIAL ABILITY TO SUPPLY THE PUBLIC SECTOR MARKET: TABLES 8 and 9

This part focuses on the provincial ability to supply the public sector demand.

Of total expenditures of $43.5 billions, the amount spent on Canadian sourced goods and services was $36.1 billions. This amount consists of:

- $13.0 billions spent on manufactured goods
- $23.1 billions spent on services and primary industry products.

As the only available data about source of supply by province are for manufactured goods, this section deals with the manufacturing sector as a proxy of the provincial ability to produce.

The following analysis is centered around two points:

1(a) Public Sector Demand vis à vis Provincial Industry Output: Table 8

If the total public sector expenditures on manufactured goods ($18.7 billions) were spent on goods manufactured in Canada, they would make up nearly 12% of $160.3 billions, the value of manufacturing output in Canada. As $5.7 billions were spent on imports, the remaining $13.0 billions was spent on Canadian manufactured goods which accounted for 8% of domestic output.

Following the same approach, the provincial impact has been measured, i.e., by the ratio of public sector consumption to provincial output of manufactured goods.

This is only a crude measure, because goods consumed in a province are not necessarily produced in that province. The results, thus calculated, are summarized below:

PUBLIC SECTOR PROVINCIAL CONSUMPTION ÷ PROVINCIAL MANUFACTURING OUTPUT	NO. OF PROVINCES/ TERRITORIES	PROVINCES/ TERRITORIES
%		
Less than 15	3	Que, Ont., B.C.
15 less than 30	2	Alta, N.B.
30 less than 45	3	Man., P.E.I., N.S.
45 less than 60	2	Nfld., Sask.
60 and above	2	Yukon, NWT.

From this summary, it is clear that a high percentage indicates a high level of impact caused by the public sector purchases on the manufacturing industry of the province.

1(b) Provincial Manufacturing Output by Industry Classes

The provincial ability to supply the public sector with manufactured goods is further explored in table 9. This table breaks down the public sector expenditures by province and by 120 industry classes (SIC) with a comparison to the provincial output of the same class, where available. The table also shows the number of manufacturing establishments in each province for each industry class.

The comparison of public sector expenditures and provincial output shows that in some classes, the consumption exceeds the local output; perhaps the gap is filled by goods manufactured in other provinces. In some classes, this ratio is below the class share of provincial output. This comparison provides a general reference for the planning of industrial and regional expansion. The following example clarifies this point:

There are 891 manufacturing establishments in Canada for SCIENTIFIC AND PROFESSIONAL EQUIPMENT. Their total output in 1979 reached $1,110 millions. Although 562 of these establishments are located in Quebec and Ontario, there are a few in each province (except Yukon and NWT).

Public sector consumption of these equipment was $533 millions but only $176 millions (or 33.0%) were supplied by Canadian sources and $357 millions (or 67.0%) were spent on imports. The overall imports to Canada were $1,633 millions.

As mentioned before, because the type of imports could be different from the type of equipment domestically produced, import studies on the micro level may be required to identify the particular type of equipment for import replacement.

V. PROVINCIAL ANALYSIS

2. PROVINCIAL SHARE OF THE PUBLIC SECTOR MARKET

NEWFOUNDLAND

THE MARKET SIZE:

The public sector spent $820.9 millions in Newfoundland. At 1.9% of total $43.5 billions, Newfoundland ranks 9 among provinces.

SOURCE OF SUPPLY:

- $695.2 millions or 84.7% were spent on Canadian produced goods/services.
- $125.7 millions or 15.3% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Newfoundland went to the following industry sectors:

	$Millions	% of Total
Primary Industry	38.3	4.7
Manufacturing Industry	415.6	50.6
Service Industry	367.0	44.7
TOTAL	820.9	100.0

PUBLIC SECTOR:

The amount of $820.9 millions was spent as follows:

	$Millions	% of Total	
Government Sector	435.8	53.1	(Mainly Prov. Gov't, Fed. Gov't)
Universities	50.3	6.1	
Government Enterprises	334.8	40.8	(Mainly Prov. and Fed. Enterp.)
TOTAL	820.9	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $415.6 millions spent on manufactured goods, 69% is concentrated in 7 groups, as follows:

	$Millions	% of Total
Petroleum & Coal indust.	87.5	21.1
Metal Fabricating indust.	44.6	10.7
Transportation Equip. indust.	38.5	9.3
Chemicals & Chem. Products indust.	34.2	8.2
Electrical Products indust.	32.5	7.8
Food & Beverages indust.	25.6	6.2
Non-Metallic Mineral Products indust.	25.1	6.0
Sub-Total	288.0	69.3
Others - 13 Groups	127.6	30.7
TOTAL	415.6	100.0

PRINCE EDWARD ISLAND

THE MARKET SIZE:

The public sector spent $152.5 millions in PEI. At 0.4% of total $43.5 billions, PEI ranks 11 among provinces.

SOURCE OF SUPPLY:

- $127.3 millions or 83.5% were spent on Canadian produced goods/services.
- $25.2 millions or 16.5% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Prince Edward Island went to the following industry sectors:

	$Millions	% of Total
Primary Industry	2.3	1.5
Manufacturing Industry	76.7	50.3
Service Industry	73.5	48.2
TOTAL	152.5	100.0

PUBLIC SECTOR:

The amount of $152.5 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	109.5	71.8	(Mainly Fed. & Prov. Gov't.)
Universities	1.5	1.0	
Government Enterprises	41.5	27.2	(Mainly Fed. and Prov. Enterp.)
TOTAL	152.5	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $76.7 millions spent on manufactured goods, 73% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Petroleum of Coal indust.	11.4	14.9
Transportation Equip. indust.	11.4	14.9
Food and Beverages indust.	10.0	13.0
Metal Fabricating indust.	8.7	11.3
Electrical Products indust.	5.5	7.2
Non-metallic Minerals indust.	5.1	6.6
Printing and Publishing indust.	4.1	5.3
Sub-Total - 7 Groups	56.2	73.2
Other - 13 Groups	20.5	26.8
TOTAL	76.7	100.0

NOVA SCOTIA

THE MARKET SIZE:

The public sector spent $2,087.3 millions in Nova Scotia at 4.8% of total $43.5 billions, Nova Scotia ranks 6 among provinces.

SOURCE OF SUPPLY:

- $1,581.4 millions or 75.9% were spent on Canadian produced goods/services.
- $505.9 millions or 24.1% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Nova Scotia went to the following industry sectors:

	$Millions	% of Total
Primary Industry	117.0	5.6
Manufacturing Industry	1,104.0	52.9
Service Industry	866.3	41.5
TOTAL	2,087.3	100.0

PUBLIC SECTOR:

The amount of $2,087.3 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	1,252.5	60.0	(Mainly Fed & Prov. Gov't)
Universities	46.9	2.3	
Government Enterprises	787.9	37.7	(Mainly Prov. & Fed. Enterp.)
TOTAL	2,087.3	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $1,104.0 millions spent on manufactured goods, 78% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Transportation Equipment indust.	296.1	26.8
Petroleum and Coal indust.	182.2	16.5
Food and Beverages indust.	85.3	7.7
Metal Fabricating indust.	84.3	7.6
Electrical Products indust.	79.5	7.2
Machinery indust.	73.9	6.7
Chemicals & Chem. Products indust.	61.6	5.6
Sub-Total - 7 Groups	862.9	78.1
Others - 13 Groups	241.1	21.9
TOTAL	1,104.0	100.0

NEW BRUNSWICK

THE MARKET SIZE:

The public sector spent $1,393.4 millions in New Brunswick at 3.2% of total $43.5 billions, New Brunswick ranks 8 among provinces.

SOURCE OF SUPPLY:

- $1,098.1 millions or 78.8% were spent on Canadian produced goods/services.
- $295.3 millions or 21.2% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in New Brunswick went to the following industry sectors:

	$Millions	% of Total
Primary Industry	21.5	1.5
Manufacturing Industry	834.3	59.9
Service Industry	537.6	38.6
TOTAL	1,393.4	100.0

PUBLIC SECTOR:

The amount of $1,393.4 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	582.1	41.8	(Mainly Fed. & Prov. Gov't's.)
Universities	25.0	1.8	
Government Enterprises	786.3	56.4	(Mainly Prov. and Fed. Enterp.)
TOTAL	1,393.4	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $834.3 millions spent on manufactured goods, 82% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Electrical Products indust.	152.2	18.3
Petroleum & Coal indust.	151.8	18.2
Machinery indust.	97.0	11.6
Transportation Equipment indust.	86.5	10.4
Metal Fabricating indust.	73.8	8.8
Chemicals & Chem. Products indust.	63.6	7.6
Food and Beverages indust.	57.3	6.9
Sub-Total - 7 Groups	682.2	81.8
Others - 13 Groups	152.1	18.2
Total	834.3	100.0

QUEBEC

THE MARKET SIZE:

The public sector spent $9,490.8 millions in Quebec. At 21.8% of total $43.5 billions, Quebec ranks 2 among provinces.

SOURCE OF SUPPLY:

- $7,922.0 millions or 83.5% were spent on Canadian produced goods/services.
- $1,500.0 millions or 16.5% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Quebec went to the following industry sectors:

	$Millions	% of Total
Primary Industry	166.4	1.8
Manufacturing Industry	4,476.9	47.2
Service Industry	4,847.5	51.0
TOTAL	9,490.8	100.0

PUBLIC SECTOR:

The amount of $9,490.8 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	4,730.8	49.9	(Mainly Prov. & Local Govt)
Universities	181.8	1.9	
Government Enterprises	4,578.2	48.2	
TOTAL	9,490.8	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $4,476.9 millions spent on manufactured goods, 72% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Electrical Products indust.	651.5	14.6
Metal Fabricating indust.	497.4	11.1
Petroleum & Coal indust.	479.7	10.7
Machinery indust.	454.5	10.2
Transportation Equip. indust.	438.4	9.8
Primary Metal indust.	395.6	8.8
Printing & Publishing indust.	300.8	6.7
Sub-total - 7 Groups	3,217.9	71.9
Others - 13 Groups	1,259.0	28.1
TOTAL	4,476.9	100.0

ONTARIO

THE MARKET SIZE:

The public sector spent $14,882.8 millions in Ontario. At 34.1% of total $43.5 billions, Ontario ranks 1 among provinces.

SOURCE OF SUPPLY:

- $12,145.3 millions or 81.6% were spent on Canadian produced goods/services.
- $2,737.5 millions or 18.4% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Ontario went to the following industry sectors:

	$Millions	% of Total
Primary Industry	1,222.4	8.2
Manufacturing Industry	5,778.6	38.8
Service Industry	7,881.8	53.0
TOTAL	14,882.8	100.0

PUBLIC SECTOR:

The amount of $14,882.8 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	7,206.3	48.4	(Mainly Fed. & Prov. Govt.)
Universities	236.4	1.6	
Government Enterprises	7,440.1	50.0	(Mainly Fed. & Prov. Enterp.)
TOTAL	14,882.8	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $5,778.6 millions spent on manufactured goods, 73% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Petroleum & Coal indust.	791.7	13.7
Electrical Products indust.	682.6	11.8
Transportation Equip. indust.	598.6	10.4
Machinery indust.	578.4	10.0
Chemicals & Chem. Products indust.	577.5	10.0
Food & Beverages indust.	507.4	8.8
Fabricating Metal indus.	494.6	8.6
Sub-Total - 7 Groups	4,230.8	73.3
Others - 13 Groups	1,547.8	26.7
TOTAL	5,778.6	100.0

MANITOBA

THE MARKET SIZE:

The public sector spent $3,741.6 millions in Manitoba. At 8.6% of total $43.5 billions, Manitoba ranks 5 among provinces.

SOURCE OF SUPPLY:

- $3,307.2 millions or 88.4% were spent on Canadian produced goods/services.
- $434.4 millions or 11.6% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Manitoba went to the following industry sectors:

	$Millions	% of Total
Primary Industry	1,305.1	34.9
Manufacturing Industry	1,233.3	33.0
Service Industry	1,203.2	32.1
TOTAL	3,741.6	100.0

PUBLIC SECTOR:

The amount of $3,741.6 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	946.9	25.3	(Mainly Prov. & Local Govt.)
Universities	31.3	0.8	
Government Enterprises	2,763.4	73.9	(Mainly Fed. & Prov. Enterp.)
TOTAL	3,741.6	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $1,233.3 millions spent on manufactured goods, 80% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Primary Metal indust.	433.0	35.1
Petroleum & Coal indust.	114.8	9.3
Food & Beverages indust.	99.8	8.1
Electrical Products indust.	94.8	7.7
Transportation Equip. indust.	91.7	7.4

SASKATCHEWAN

THE MARKET SIZE:

The public sector spent $1,959.0 millions in Saskatchewan. At 4.5% of total $43.5 billions, Saskatchewan ranks 7 among provinces.

SOURCE OF SUPPLY:

- $1,650.7 millions or 84.3% were spent on Canadian produced goods/services.
- $308.3 millions or 15.7% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Saskatchewan went to the following industry sectors:

	$Millions	% of Total
Primary Industry	116.7	6.0
Manufacturing Industry	812.4	41.5
Service Industry	1,029.9	52.5
TOTAL	1,959.0	100.0

PUBLIC SECTOR:

The amount of $1,959.0 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	917.3	46.8	(Mainly Prov. & Local Govt.)
Universities	38.9	2.0	
Government Enterprises	1,002.8	51.2	(Mainly Fed. & Prov. Enterp.)
TOTAL	1,959.0	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $812.4 millions spent on manufactured goods, 72% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Electrical Products indust.	102.1	12.6
Transportation Equip. indust.	89.6	11.0
Metal Fabricating indust.	88.8	10.9
Food & Beverages indust.	83.1	10.2
Machinery indust.	78.4	9.7
Petroleum & Coal indust.	74.5	9.2
Printing & Publishing indust.	64.9	8.0
Sub-Total - 7 Groups	581.4	71.6
Others - 13 Groups	231.0	28.4

ALBERTA

THE MARKET SIZE:

The public sector spent $3,845.4 millions in Alberta. At 8.8% of total $43.5 billions, Alberta ranks 4 among provinces.

SOURCE OF SUPPLY:

- $3,195.1 millions or 83.1% were spent on Canadian produced goods/services.
- $650.3 millions or 16.9% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Alberta went to the following industry sectors:

	$Millions	% of Total
Primary Industry	145.3	3.8
Manufacturing Industry	1,847.6	48.0
Service Industry	1,852.5	48.2
TOTAL	3,845.4	100.0

PUBLIC SECTOR:

The amount of $3,845.4 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	2,292.9	59.6	(Mainly Prov. & Local Govt.)
Universities	88.2	2.3	
Government enterprises	1,464.3	38.1	(Mainly Fed. & Prov. Enterp.)
TOTAL	3,845.4	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $1,847.6 millions spent on manufactured goods, 72% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Electrical Products indust.	289.6	15.7
Food & Beverages indust.	243.3	13.1
Transportation Equip. indust.	207.0	11.2
Petroleum & Coal indust.	198.8	10.8
Metal Fabricating indust.	193.6	10.5
Machinery indust.	142.3	7.7
Non-Metallic Mineral Products indust.	98.1	5.3

Others - 13 Groups	474.9	25.7
TOTAL	1,847.6	100.0

BRITISH COLUMBIA

THE MARKET SIZE:

The public sector spent $4,836.4 millions in British Columbia. At 11.1% of total $43.5 billions, British Columbia ranks 3 among provinces.

SOURCE OF SUPPLY:

- $4,078.4 millions or 84.3% were spent on Canadian produced goods/services.
- $758.0 millions or 15.7% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in British Columbia went to the following industry sectors:

	$Millions	% of Total
Primary Industry	222.1	4.6
Manufacturing Industry	2,002.8	41.4
Service Industry	2,611.5	54.0
TOTAL	4,836.4	100.0

PUBLIC SECTOR:

The amount of $4,836.4 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	2,423.9	50.1	(Mainly Prov. & Local Govt.)
Universities	69.6	1.4	
Government enterprises	2,342.9	48.5	(Mainly Fed. & Prov. Enterp.)
TOTAL	4,836.4	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $2,002.8 millions spent on manufactured goods, 73% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Transportation Equip. indust.	275.4	13.8
Food & Beverages indust.	243.9	12.2
Petroleum & Coal indust.	229.3	11.4
Electrical Products indust.	207.3	10.4
Metal Fabricating indust.	204.2	10.2
Machinery indust.	154.1	7.7
Printing & Publishing indust.	153.1	7.6

Others - 13 Groups	535.5	26.7
TOTAL	2,002.8	100.0

YUKON

THE MARKET SIZE:

The public sector spent $125.1 millions in Yukon. At 0.3% of total $43.5 billions, Yukon ranks 12 among provinces.

SOURCE OF SUPPLY:

- $110.4 millions or 88.2% were spent on Canadian produced goods/services.
- $14.7 millions or 11.8% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Yukon went to the following industry sectors:

	$Millions	% of Total
Primary Industry	1.6	1.3
Manufacturing Industry	50.5	40.4
Service Industry	73.0	58.3
TOTAL	125.1	100.0

PUBLIC SECTOR:

The amount of $125.1 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	108.6	86.8	(Mainly Prov. & Fed. Govt.)
Universities	-	-	
Government Enterprises	16.5	13.2	(Mainly Fed. & Prov. Enterp.)
TOTAL	125.1	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $50.5 millions spent on manufactured goods, 72% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Petroleum & Coal indust.	8.8	17.4
Metal Fabricating indust.	6.9	13.7
Non-Metallic Mineral Products indust.	5.2	10.3
Transportation Equip. indust.	4.8	9.5
Electrical Products indust.	4.3	8.5
Food & Beverages indust.	3.9	7.7
Primary Metal indust.	2.6	5.2
Sub-Total - 7 Groups	36.5	72.3
Others - 13 Groups	14.0	27.7
TOTAL	50.5	100.0

NORTHWEST TERRITORIES

THE MARKET SIZE:

The public sector spent $209.5 millions in NWT. At 0.5% of total $43.5 billions, Northwest Territories ranks 10 among provinces.

SOURCE OF SUPPLY:

- $184.8 millions or 88.2% were spent on domestic goods/services.
- $24.7 millions or 11.8% were spent on imports.

INDUSTRY SECTORS:

Public sector expenditures in Nortwest Territories went to the following industry sectors:

	$Millions	% of Total
Primary Industry	10.4	5.0
Manufacturing Industry	86.2	41.1
Service Industry	112.9	53.9
TOTAL	209.5	100.0

PUBLIC SECTOR:

The amount of $209.5 millions was spent as follows:

	$ Millions	% of Total	
Government Sector	141.2	67.4	(Mainly Prov. & Fed. Govt.)
Universities	-	-	
Government Enterprises	68.3	32.6	(Mainly Fed. & Prov. Enterp.)
TOTAL	209.5	100.0	

MAJOR MANUFACTURING INDUSTRIES:

Of the $86.2 millions spent on manufactured goods, 72% is concentrated in 7 groups, as follows:

	$ Millions	% of Total
Petroleum & Coal indust.	19.8	23.0
Metal Fabricating indust.	9.7	11.3
Transportation Equip. indust.	8.7	10.1
Food & Beverages indust.	6.7	7.8
Non-Metallic Mineral Products indust.	5.9	6.8
Electrical Products indust.	5.9	6.8
Machinery indust.	5.5	6.4
Sub-Total - 7 Groups	62.2	72.2
Others - 13 Groups	24.0	27.8
TOTAL	86.2	100.0

VI. DEFINITIONS AND NOTES

Public sector expenditure in this study includes direct purchases of manufactured goods, construction and related services. Excluded are salaries and wages and indirect purchases of goods through transfer payments.

Public sector in this study, includes the following:

1. GOVERNMENT SECTOR

   Federal Government
   Provincial Governments
   Local Governments
   Hospitals

2. UNIVERSITIES

3. GOVERNMENT ENTERPRISES

   Federal
   Provincial
   Local

Primary industries include the following divisions in the Standard Industrial Classification (SIC):

1. Agriculture
2. Forestry
3. Fishing and Trapping
4. Mines (including Milling), Quarries and Oil Wells.

Goods Manufacturing Industries: This classification is based on Division 5 of the SIC Codes.

Services: Include the following SIC Divisions:

DIV. 6: Construction
7: Transportation, Communications and Other Utilities
8: Trade
9: Finance, Insurance, and Real Estate
10: Community, Business and Personal Services

For further information of the SIC classifications see Statistics Canada Catalogue No. 12-501, revised 1970: STANDARD INDUSTRIAL CLASSIFICATION.

In some tables the Input-Output codes of 5-digit industry classes were used. These classes are equivalent to SIC classes. Convertibility tables of the two systems are found in Statistics Canada's Catalogue No. 15-201 E. THE INPUT-OUTPUT STRUCTURE OF THE CANADIAN ECONOMY, 1979.

III ANALYSIS

2. PUBLIC SECTOR

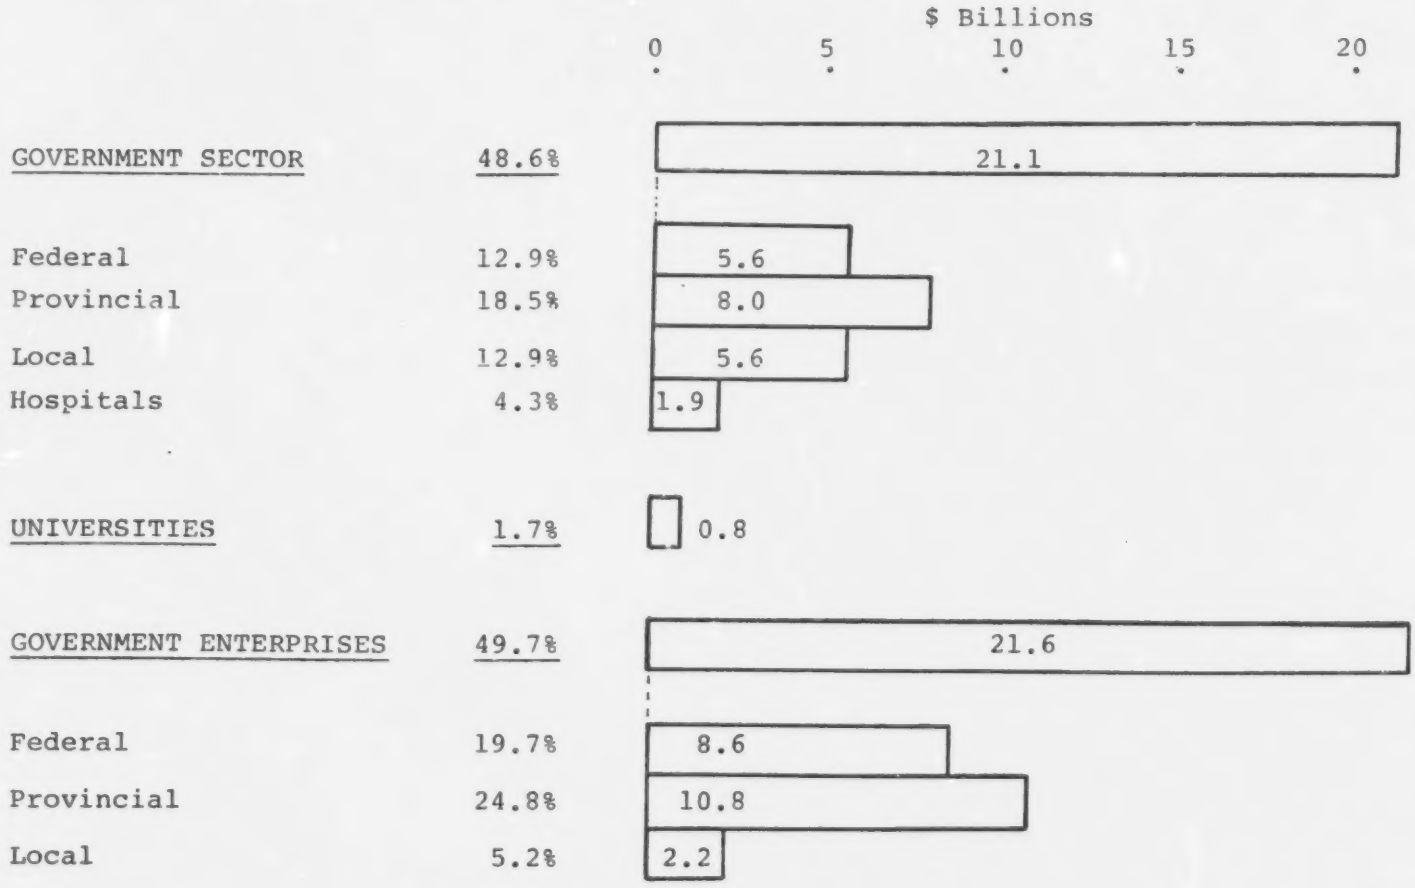
CHART 2

PUBLIC SECTOR EXPENDITURES ON GOODS AND RELATED SERVICES, 1979



Total:	100.0%	43.5

TABLE I

PUBLIC SECTOR EXPENDITURES ON GOODS AND RELATED SERVICES, 1979

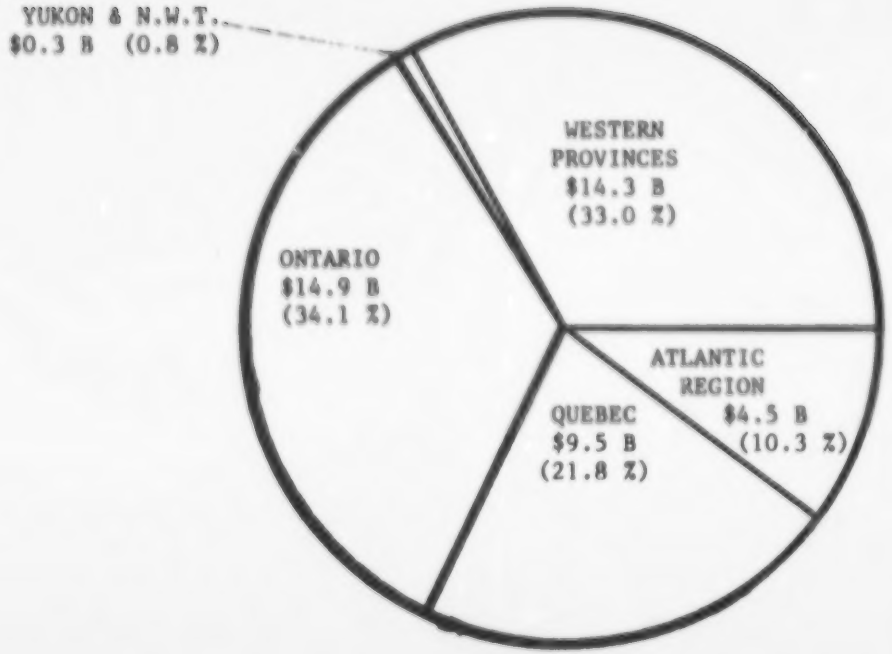
PUBLIC SECTOR	EXPENDITURES	
	AMOUNT	% OF TOTAL
	$M	
A. GOVERNMENT SECTOR:		
- FEDERAL GOVERNMENT	5,608	12.9
- PROVINCIAL GOVERNMENTS	8,045	18.5
- LOCAL GOVERNMENTS	5,616	12.9
- HOSPITALS	1,879	4.3
SUB-TOTAL	21,148	48.6
B. UNIVERSITIES	766	1.7
C. GOVERNMENT ENTERPRISES		
- FEDERAL	8,585	19.7
- PROVINCIAL	10,798	24.8
- LOCAL	2,244	5.2
SUB-TOTAL	21,627	49.7
TOTAL	43,541	100.0

III ANALYSIS

3. PROVINCIAL SHARE OF THE PUBLIC SECTOR MARKET

CHART 3

PUBLIC SECTOR EXPENDITURES BY PROVINCE, 1979



WESTERN PROVINCES	$ Billion	%
- Manitoba	3.7	8.6
- Saskatchewan	2.0	4.5
- Alberta	3.8	8.8
- British Columbia	4.8	11.1
Sub-Total:	14.3	33.0

ATLANTIC REGION	$ Billion	%
- Newfoundland	0.8	1.9
- P.E.I.	0.2	0.4
- Nova Scotia	2.1	4.8
- New Brunswick	1.4	3.2
Sub-Total:	4.5	10.3

VII SOURCES AND METHODS

SIZE AND STRUCTURE

OF THE PUBLIC SECTOR MARKET, 1979*

*This study was sponsored by the Department of Supply and Services and prepared under the direction of Kishori Lal, Director of the Input-Output Division, Statistics Canada. The chapter on Sources and Methods, as well as Appendixes on Government Business Enterprises and the statistical tables were produced by P.S.K. Murty of the Input-Output Division as project manager jointly with other members of the special working group, S. Soujrani of the Department of Supply and Services and J. Diena of the Gross National Product Division.

SIZE AND STRUCTURE OF THE PUBLIC SECTOR MARKET, 1979: SOURCES AND METHODS

I Introduction

This is a special study requested by the Department of Supply and Services to measure the size and structure of the public sector market for the calendar year 1979. A similar one for the 1974 period (1) was completed for the federal departments of Industry, Trade and Commerce and Supply and Services.

The public sector market herein refers to all goods and services purchased by the three levels of government, universities and government business enterprises for both current operations and capital formation as per the system of National Accounts concepts. It excludes transfer payments such as grants and subsidies. It is worth repeating that the 1974 study was undertaken to answer the following questions of the Federal-Provincial Working Group established by the First Ministers during November 1978:

1. What is the total dollar value of public sector's purchases of goods and services?

---

(1) The Size and Structure of the Public Sector Market 1974-76, prepared by the Department of Supply and Services for the Federal-Provincial Working Group on Cooperation in Procurement Policy, January 1981. See Appendix II for P.S.K. Murty "Methodology for Derivation of Public Sector's Purchases of Goods and Services, 1974".

2. What is the content of these purchases in terms of specific commodities?

3. What is the estimated import-content and domestic production of these commodity purchases? In other words, what is the source of supply, namely, imports and/or domestic production? (This refers to direct import content only.)

4. Which industries are getting the benefit of these commodity purchases?

5. What is the provincial distribution of the above?

Answers to these questions were provided for 1974 and the results released by the Department of Supply and Services in its report prepared for the Federal-Provincial Working Group on Procurement Policy(2). The purpose of this project is to update the previous study with 1979 data.

It was decided to use the conceptual and statistical framework of the System of National Accounts for the required data base. As is well known, the System of National Accounts provides an over-all conceptually integrated framework to study the economy. It consists of several parts such as the National Income and Expenditure Accounts, Input-Output Accounts, Balance of International Payments, and Real Domestic Product. All these parts can be considered to be interrelated subsystems and they use the same conceptual framework. Of the several parts, the input-output accounts provide input

2. The Size and Structure of the Public Sector Market, 1974-76, January, 1981, op. cit.

details on industries and goods and services which are called "commodities". Since the primary objective is to measure the size and structure of public sector purchases in terms of specific commodities, it has been necessary to use the input-output subsystem in this project.

The public sector for this report consists of three segments:

(1) Government sector (federal, provincial, municipal, education and hospitals).

(2) Universities.

(3) Government business enterprises (federal, provincial and local).

These segments are defined in the next section. It should be noted at the outset that the required statistical information of the public sector is not readily available from a single source but had to be drawn from a variety of sources.

In the course of the research, similar data gaps and problems as in the 1974 project have been encountered. These gaps have been filled with estimates based on better coverage particularly for municipal government and government business enterprises. It is felt, however, that a continuing program of research and development is desired to obtain a more solid data base for future studies.

II Definition of the Public Sector

In this study, the public sector is defined to include the government sector (federal, provincial, municipal and hospitals), universities, and government business enterprises (federal, provincial and local). They are outlined below.

1. Government Sector

This sector covers a very broad range of activities carried out directly by various levels of government - federal, provincial, municipal, and hospitals - and is the same as defined in the Canadian System of National Accounts(3) (hereafter referred to as "National Accounts"). It represents the non-commercial activities undertaken by society on a collective basis and financed, for the most part, from taxation or borrowing. It also includes transactions of the federal and provincial special funds listed in Appendixes I and II respectively. These special funds have functions similar to those of the government sector as defined in the National Accounts.

2. Universities:

Universities are post-secondary institutions for which no elaborate definition is needed.(4) In the National Accounts, universities are

---

(3) National Income and Expenditure Accounts, Volume 3, a Guide to the National Income and Expenditure Accounts, Definitions - Concepts-Sources-Methods, Statistics Canada, Catalogue 13-549E, Occasional, p. 165.

(4) Further information is contained in Financial Statistics of Education, 1979-80, Statistics Canada, Catalogue 81-208, Annual.

classified to the personal sector because they are considered to be private non-commercial institutions; but for this report, they are included with the public sector as the major source of their revenue is grants from government.(5)

3. Government Business Enterprises:

These are entities primarily owned by government (federal, provincial and local) which produce goods and services for sale in the open market at cost or for profit. Their general motivation and behavior are similar to those of private business enterprises. The federal, provincial and local enterprises are listed in Appendixes III, IV and V respectively.(6)

(5) Financial Statistics of Education, Catalogue 81-208 op. cit., Table 18, p. 69. This table shows university operating revenues excluding sponsored research by source of funds.

(6) The Post Office and the Bank of Canada are added to the list of the Public Finance Division, while Atomic Energy and Cape Breton Development have been excluded to be in line with the National Accounts concepts. To that extent, the list in Appendix III differs from that of the Public Finance Division (Federal Government Enterprise Finance, 1979, Catalogue 61-203, Annual). For Provincial Government Business Enterprises, see Provincial Government Enterprise Finance, 1979, Catalogue 61-204, Annual. There is no similar publication as yet for Local Government Business Enterprises. However, Appendix V contains a list which is used for this study.

III Sources and Methods

As noted in the introductory section, the main purpose of this study is to determine the total current and capital expenditures of the public sector and to identify the specific commodities in terms of the input-output system. At the present time, the data of the public sector expenditures are not available from a single source or an integrated publication and hence they must be gathered from a variety of sources. This section deals with those sources and methods used to derive the total expenditures at the national level. The details for provincial allocation of the national levels will be discussed in the next section.

For the purpose of data collection and presentation of statistical information in this study, the public sector has been organized into the following 28 categories:

A. Current Expenditures

1. Government sector: hospitals
2. Government sector: education
3. Government sector: defence
4. Government sector: other municipal government
5. Government sector: other provincial government
6. Government sector: other federal government
7. Universities
8. Government business enterprises: federal
9. Government business enterprises: provincial
10. Government business enterprises: local

B. Capital Expenditures: Machinery and Equipment (M & E)

11. Government sector: hospitals
12. Government sector: education
13. Government sector: other municipal government
14. Government sector: other provincial government
15. Government sector: other federal government
16. Universities
17. Government business enterprises: federal
18. Government business enterprises: provincial
19. Government business enterprises: local

C. Capital Expenditures: New Construction (CON)

20. Government sector: hospitals
21. Government sector: education
22. Government sector: other municipal government
23. Government sector: other provincial government
24. Government sector: other federal government
25. Universities
26. Government business enterprises: federal
27. Government business enterprises: provincial
28. Government business enterprises: local

The sources and methods used to derive the commodity details for the 28 categories are discussed here.

A. Current Expenditures

(1) Government Sector

The government sector represents six subsectors of the input-output accounts. These subsectors are:

(i) Hospitals

(ii) Education

(iii) Defence

(iv) Other Federal Government

(v) Other Provincial Government

(vi) Other Municipal Government

The hospital and education subsectors have been created by removing the concerned institutions from the three levels of government (federal, provincial, and municipal) and by classifying them as separate subsectors. It is in this context that the three levels of government are described as "other federal", "other provincial" and "other municipal".

As noted earlier, the sources for basic data on expenditures are varied and have been pulled together for this project. In all these cases, the expenditure details extracted from various sources have been examined as to content and classification and converted into the relevant input-output categories of goods and services which are called "commodities". The expenditures on some specific items such as, repair construction, depreciation, wages and salaries, and supplementary labour income, etc. have

been used after making suitable adjustments to conform to the input-output definitions. This procedure is common to all government subsectors described above.

The detailed sources and methods of the subsectors are outlined below.

(i) Hospitals

This subsector covers all federal, provincial, and public general and allied hospitals. The Health Division's annual surveys are the principal sources of data.

They are:

(a) "Annual Return of Health Care Facilities - Hospitals," parts one and two, for public general and allied hospitals;

(b) Annual Return of Mental Institutions(7) for provincial hospitals.

Expenditures by economic-object(8) details from federal departments of Veterans Affairs and National Health and Welfare have been used for federal hospitals. The conversion process from object codes to input-output commodity codes is simple where details have a one-to-one relationship. Problems arose when some expenditures had insufficient content detail.

---

(7) Mental Health Statistics, Statistics Canada, Volume III Institutional facilities, services and finances, 1979-80, Catalogue 83-205, Annual, and Hospital Annual Statistics 1979-80, Catalogue 83-232, containing summary tables.

(8) All federal government departments classify their expenditures into uniform categories, known as "economic objects" which have been converted into suitable input-output commodities after an analysis of their content detail.

This required research to determine the relevant content and to classify to the commodities concerned. Thus the gross current operating expenditures of all hospitals have been allocated to commodities and organized into the input-output Final Demand column GCE 122. All the commodities at the Canada level have been subjected to further verification by the commodity balancing technique(9) and adjusted where necessary to maintain consistency between production and consumption of each commodity.

(ii) Education

This subsector includes federal, defence (DND schools), provincial and local education except Newfoundland school boards which are included in the personal sector along with universities in accordance with the National Accounts concepts.

The basic source of information for education expenditures are as follows:

(a) Federal - Department of Indian and Northern Affairs;

(b) Defence - Department of National Defence;

(c) Provincial - Provincial Public Accounts and economic object details from some provinces such as Ontario;

(d) Local school boards - Annual financial statements of school boards in the uniform financial information system.(10) These financial statements are received by the Education, Science and

(9) The Input-Output Structure of the Canadian Economy, 1971-78, Statistics Canada, Catalogue 15-201E Annual, page 29.

(10) Financial Statistics of Education, 1979-80, Statistics Canada, Catalogue 81-208 Annual, where summary tables are published.

Culture Division from each provincial department of education and they contain expenditure details by function and economic classification.

Here again, all the available details of expenditures have been converted into input-output commodities and estimates made where required. The commodity data thus obtained have been organized into the Final Demand Input column GCE 123. The data are subjected to further checks and balances as explained for the hospital subsector.

(iii) Defence and (iv) Other federal government

These two subsectors are discussed together because of the same data source, namely, the Government of Canada Accounting Branch, Department of Supply and Services (DSS). Each federal department classifies its expenditures by economic object and reports to the Central Accounting Branch, DSS. The details available for purposes of this project have been obtained from this source. As further disaggregation is needed for some of the categories used for the defence subsector, alternative tabulations by "resource codes" have also been obtained from the Department of National Defence. As the resource code information has more details than the economic object data, problem areas were investigated and solved. Finally, all these expenditures have been converted into commodities and organized into the Final Demand Input columns GCE 124 for "defence" and GCE 127 for "other federal". These have been subjected to similar checks as outlined for previous subsectors. It should be noted here that defence expenditures cover both current and capital in line with the practices of National Accounts.

(v) Other Provincial Government

The expenditures of seven provinces (New Brunswick, Quebec, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia) and of Yukon Territory are available by various economic object classes in the files of the governments concerned. These details have been obtained through computer print-outs on a confidential basis for internal use only. As the economic object classes have been developed by each government in the context of its own requirements, they are not consistent among the provinces. In other words, the coding pattern is different from province to province and considerable content analysis was required to develop a concordance - system for each province to convert into the required input-output commodities. Problems of disaggregation have been encountered here also and procedures discussed earlier have been used. The input-output commodity data have been organized into Final Demand Input column GCE 126 and have been subjected to the standard consistency checks.

(vi) Other Municipal Government

At the present time, the Public Finance Division compiles total expenditures for all municipalities for use in the National Accounts. The commodity details are not available from this source.

It was felt that these commodity details could not be supplied by most of the municipalities and therefore it was decided that they could be obtained on a sample basis from some of the larger municipalities. Accordingly, some 120 municipalities, representing all provinces and territories, were requested

through the Public Finance Division to send available details of their expenditures to determine the commodity content. In response, 75 municipalities (about 60%) sent information and the remainder could not comply with the request. The details thus obtained have been examined as to the content and transformed into input-output commodities. This is a significant improvement over the previous study which utilized details from relatively fewer municipalities. Problems of disaggregation have been encountered here also and they have been resolved by obtaining more specific information from the municipalities concerned. The commodity content thus obtained has been used as a sample to determine the content of the total gross expenditures of municipal government which have been compiled for use in the National Accounts. The results have been organized into Final Demand Input column GCE. 125 and the standard quality checks have been applied as in the other subsectors.

(2) Universities:

This category includes Universities and Newfoundland School Boards, both of which belong to the personal sector according to National Accounts concepts. The Education, Science and Culture Division conducts an annual survey for the university financial statistics. The expenditure data from this survey(11) have been examined as to content and classification and converted to relevant commodities for this study. For Newfoundland School Boards, the source of information is the same as outlined for local

(11) Financial Statistics of Education, 1979-80, Statistics Canada, Catalogue 81-208 Annual, contains summary tables.

education. These expenditures are organized and presented as part of Final Demand Input column CE 33, Education and Cultural Services.

(3) Government Business Enterprises

The Government Business Enterprises covered in this study are listed in Appendixes III, IV and V for federal, provincial and local respectively. The Public Finance Division classified these enterprises into industries of the Standard Industrial Classification system. For the input-output system, however, these S.I.C codes have been converted to I.O. industry codes as shown in the last columns of the appendixes.

In some cases, an enterprise has to be coded to several I.O. industries depending on the establishments and their activities involved. For example, the Canadian National Railway System contains hotels and water transportation besides railway transportation and hence has to be coded to three I.O. industries. This process of conversion has proved to be fairly complex especally for multi-industry enterprises. In these instances, additional sources of information contained in various divisions of the bureau such as Transportation, Merchandising, etc., have been used to analyse and resolve the problems.

The total expenditures of government business enterprises on goods and services (commodities) are utilized whether they are intended for intermediate use in the production process or for resale. For this reason, industries such as electric power utilities, wholesale and retail trades which purchased goods for their internal use (inputs) or for resale will have these commodities reflected in their total expenditures.

It should also be noted that the expenditures of these enterprises determined for this study include depreciation (capital consumption), net interest paid (interest paid less interest received), and net profit or loss, all of which are included in I.O. commodity 602 - "operating surplus". The derivation of this "operating surplus" required specific calculations from the data reported in the financial statements of each government enterprise.

The above outline represents the general framework in which the data of the government business enterprises have been collected and organized by industry and by commodity. The specific sources and methods applicable to each of the three levels of business enterprises are outlined below.

(i) Federal Government Business Enterprises.

The expenditure details contained in the financial statements received by the Public Finance Division have been used for total expenditures and for specific commodities such as wages and salaries, depreciation, etc. These details have been supplemented by information from the annual surveys conducted by divisions such as Transportation, Merchandising, Labour, and the Manufacturing and Primary Industries Division (MAPID).

Expenditure details which are not readily identifiable from the sources specified above have been estimated using the pattern of the input structure of the Input-Output industry to which a given enterprise is classified. The input pattern of any industry represents not only government business enterprises but also those owned privately. The assumption implicit in this method is that the commodity input structure of the government business enterprise (for which actual information is not available) would be

similar to that of the total industry to which it was classified. These commodities have been organized in the input columns of industries to which these enterprises belong.

(ii) Provincial Government Business Enterprises

The data sources of these enterprises are quite similar to those discussed for their federal counterparts. In short, the financial statements of the Public Finance Division supplemented by the relevant survey schedules from the various divisions such as Merchandising, Transportation, etc., are the sources of information. In cases where actual commodity content is not available from the aforesaid sources, similar procedures have been followed as in the federal enterprises. The commodities have been organized into the input columns of the industries to which the enterprises have been coded in the I.O. system.

(iii) Local Government Business Enterprises:

As shown in Appendix V, these local government business enterprises are classified into four industries

(a) Industry 153 - Urban Transit Systems

(b) Industry 159 - Communication Industries

(c) Industry 161 - Electric Power

(d) Industry 162 - Gas Distribution

The basic sources of information are the annual reports and schedules available in the Transportation and Manufacturing and Primary Industries divisions. In cases where commodity details are lacking for any enterprise, estimates have been made using the input structure of the industry to which it has been classified. Here again, the commodities have been organized into the input columns of the industries concerned.

B. Capital Expenditures

The Construction Division of the bureau conducts an annual survey of capital expenditures on new construction and machinery and equipment for the total economy. The results are published in summary form(12) by industries and sectors. This is the primary source of information on capital expenditures for the following categories of the project:

(1) Hospitals

(2) Education

(3) Other municipal government

(4) Other provincial government

(5) Other federal government

(6) Universities

(7) Federal government business enterprises

(8) Provincial government business enterprises

(9) Local government business enterprises

---

(12) Private and Public Investment in Canada, Outlook 1981, Statistics Canada, Catologue 61-205 Annual.

The informaton obtained from the Construction Division for the above has been adjusted to conform to National Accounts concepts. This adjustment required the allocation of Atomic Energy of Canada and Cape Breton Development Corporation to the "other federal" government sub-sector and inclusion of the Post Office and the Bank of Canada to federal government business enterprises.

The adjusted new construction expenditures have been allocated to the final demand input columns of the I.O. system(13) and disaggregated into commodities as outlined for each of them.

(i) Construction: Government Sector

Basic information on construction put-in-place for each subsector has been obtained from the Construction Divison and estimates have been made for the commodity content utilizing the construction input columns of the input-output accounts.

(ii) Construction: Churches and Universities

The amount for churches has been excluded to derive the portion relating to universities only. The same methods as explained for the government sector have been followed.

(iii) Construction: Federal, Provincial and Local Government Business Enterprises

Basic information has been obtained from Construction Division for each government business enterprise and assigned to the appropriate

(13) Input-Output Structure of the Canadian Economy, 1971-1978, Statistics Canada, Catalogue 15-201 E, Annual pp. 56-57.

I.O. final demand purchasing industry. In the I-O system, industry totals include government and privately owned enterprises and the commodity content for the total industries has been determined. As the specific information for the government business enterprises is not readily available, it has been assumed that the commodity content of the total industry is valid for them also and estimates have been made accordingly.

The adjusted machinery and equipment expenditures have been allocated to the final demand input columns* and disaggregated into commodities as outlined for each of them.

(i) Machinery and Equipment: Government Sector

The economic object information of federal government departments has been used for the federal subsector; similar information from the provincial governments and their public accounts has been used for the other provincial subsector; estimates have been made for other local government, hospitals and education based on information reported in annual surveys.

(ii) Machinery & Equipment: Churches and Universities

The amount for churches has been excluded to derive the portion relating to universities. The commodity content of universities has been estimated using information from the Construction and Education divisions.

---

* See footnote 13 on p. 18.

(iii) Machinery and Equipment: Federal, Provincial and Local Government Business Enterprises

As explained in the case of construction, the data of the machinery and equipment of each enterprise have been obtained from the Construction Division and transformed into the relevant industry of purchase final demand columns. As the actual information on commodity content is not available, the totals of these categories (ie. final demand columns) have been disaggregated into commodities by using the related I.O. tables. The assumption implicit in this procedure is the same as noted for the construction categories.

Ideally speaking, a special survey is required for the commodity details of machinery and equipment expenditures of the government business enterprises. It is felt that further research and development are needed in this area.

IV Provincial Distribution of Public Sector Expenditures

The preceding sections covered the definitions, sources and methods to determine the total and commodity content of public sector expenditures. The summary table(14) shown below provided the framework of 28 categories discussed previously for presenting the data at the Canada level.

(14) This table will be discussed later in the summary tabulations at producer prices.

CATEGORIES OF PUBLIC SECTOR EXPENDITURES

Subsector or Category	Current Expenditures	Capital Expenditures: Machinery and Equipment	Capital Expenditures: New Construction
Hospitals	1	11	20
Education	2	12	21
Defence	3	-	-
Other municipal government	4	13	22
Other provincial government	5	14	23
Other federal government	6	15	24
Universities	7	16	25
Federal government business enterprises	8	17	26
Provincial government business enterprises	9	18	27
Local government business entreprises	10	19	28

This same framework is used for the provincial allocation also. The sources for the provincial distribution of current expenditures are the following:

Subsector or Category	Source of Provincial Distribution
Hospitals	Health Division
Education	Education, Science and Culture Division
Other Municipal Government	Public Finance Division
Other Provincial Government	Public Finance Division
Universities	Education, Science and Culture Division
Provincial government business enterprises	Public Finance Divisions
Local government business enterprises	Transportation, and Manufacturing and Primary Industries Divisions

The sources for the total capital expenditures by province on both machinery and equipment and new construction are the survey details of the Construction Division. These provincial totals have been prorated to the commodities by using the pattern determined for Canada as described in the previous section.

From the foregoing, we are left with defence, other federal and federal enterprises where the provincal distribution is not readily available. Therefore, considerable research was necessary to determine the provincial distribution. The detailed methods are outlined below.

(i) "Defence" and "Other Federal" subsectors

As explained in the previous section, the current expenditures of these subsectors have been allocated to commodities by using the economic object data and presented in Final Demand input column 124 for defence and column 127 for "other federal". This basic economic object information by province is available in a study of the Department of Finance. That report has been used to allocate by province the current expenditures of both defence and other federal subsectors. In the case of some commodities for which information is lacking from that source, alternative allocators (such as employment data by province) have been used.

As regards capital expenditures for other federal government subsector, details for totals by province have been obtained from the Construction Division for both machinery and equipment and adjustments made to conform to National Accounts concepts. Here again, the Finance Department economic object information by province for machinery and equipment commodities has been used. For new construction, the provincial data are available in the survey details of the Construction Division.

(ii) Federal Government Business Enterprises

In order to distribute the current expenditures of federal enterprises by province, it was necessary to examine the operations of these businesses in

the context of information supplied from survey divisions. If the operations of an enterprise are situated in one province, the expenditures by commodity have been allocated to that particular province. In cases of enterprises which operate in more than one province, information obtained from provincial returns of the survey divisions has been used to allocate the totals. However, where this kind of information was unavailable, appropriate indicators such as wages and salaries by province of the enterprises concerned have been used.

Capital expenditure data of these enterprises by province for both machinery and equipment and new construction have been obtained from the Construction Division and allocated to the final demand categories as explained in the previous section. The commodity disaggregation procedure is the same as the one used for the Canada totals.

V Conversion of Values form "Purchaser Prices" to "Producer Prices"

(1) Purchaser Prices to Producer Prices

Thus far, the discussion has been confined to the commodity content and provincial distribution in the purchaser prices for the 28 categories. Since the main purpose of this study is to estimate the amount received by the producers, it is necessary to convert the purchaser price values into producer price values. In other words, taxes and other margins(15) which are embodied

(15) The additional costs over and above the producer price incurred by the purchaser are called margins such as wholesale and retail, transport and tax margins.

in the commodity purchases have to be removed and shown as being purchased directly from the producers of these margins.

The conversion from purchaser to producer values is available for each commodity at Canada level in the national input-output tables for 1979. This conversion framework has been applied to the provincial commodity expenditure values. Implicit in this conversion technique is the assumption that the national rates of margins are the same for the provinces as well. In other words, the producer and purchaser value relationships applicable to national levels have been assumed to be the same for provinces also. The tabulations showing the margins thus derived by province have been reviewed in the context of additional information concerning provincial sales taxes and necessary adjustments made for the tax margin.

In other words, the producer price tabulations of the 28 categories have been finalized after making the necessary adjustments for the tax margin. These categories are then aggregated into the following 8 categories for both current and capital expenditures as requested by the Department of Supply and Services.

(i) Federal government (includes "defence" and "other federal")

(ii) Provincial government (equals "other provincial")

(iii) Local government (includes "other local" and education)

(iv) Hospitals

(v) Universities

(vi) Federal government business enterprises

(vii) Provincial government business enterprises

(viii) Local government business enterprises

It should be noted that the input-output system contains special groups of commodities for construction and dummy industries. These commodities are catch-all categories representing aggregates and require special treatment to disaggregate them into more detailed commodities. These are discussed next.

(2) Disaggregation of Construction and Dummy Commodities

(i) Construction commodities

In the input-output system, each construction "activity" is gathered together into a corresponding industry which produces one type of construction commodity. These commodities are essentially categories of work-put-in-place which are produced by the industries shown below:

Commodity Number	Commodity and Industry Title	Industry Number
522	Repair construction	138
523	Residential construction	139
524	Non-residential construction	140
525	Road, highway and airstrip construction	141
526	Gas and oil facility construction	142
527	Dams and irrigation projects	143
528	Railway, telephone and telegraph construction	144
529	Other engineering construction	145

Thus, for example, the repair construction industry (138) produces repair construction commodity (522) by using commodity inputs such as lumber, cement, etc., as its inputs. The above eight construction commodities do not tell us the commodities bought from other industries; we have to turn to the inputs of the corresponding construction industries to identify the market-oriented commodities, i.e. those commodities which had to be purchased from other industries. Because of the direct link of the construction commodities to corresponding construction industries explained above, it is possible to transform them into the market-oriented commodities by applying the input structure of the relevant construction industries. Then, these commodities have been integrated into the 8-category framework mentioned earlier.

(ii) "Dummy" Commodities - "Dummy" Industries

Similar to the construction commodities and industries above, the input-output system has 8 dummy commodities with an equal number of dummy industries. Here again, each dummy industry produces one dummy commodity as shown below:

Dummy Commodity Number	Dummy Commodity and Dummy Industry Title	Dummy Industry Number
580	Operating supplies (spare parts, maintenance supplies for machinery and equipment)	184
581	Office supplies	185
582	Cafeteria requirements (cafeteria supplies)	186
583	Transportation margin	187
584	Laboratory supplies (laboratory equipment and supplies)	188
585	Travel and entertainment	189
586	Advertising and promotion	190
587	Machinery repair services (purchased repair services for machinery and equipment)	191

The dummy commodities are catch-all categories for which precise content for each purchasing industry is unknown. Therefore, the detailed commodity purchases represented by these "dummy" categories have to be obtained by applying the Use Matrix of the corresponding dummy industries. For example, the dummy commodity "office supplies" is produced by the dummy industry "office supplies" by using paper, envelopes, paper clips, etc. as its inputs. In view of this, we must turn to inputs of these industries to transform the dummy commodities into their component commodities. It is in this sense, the input structure of these industries has been applied to the corresponding dummy commodities and derived their component commodities. The analytical implication of this technique is that under the assumption of industry technology, the detailed composition of a particular dummy commodity used by the public sector is in proportion to the commodity inputs of the corresponding industry. The commodities derived in this manner have been integrated into the 8 category framework.

(3) Purchases from Imports

It should be noted that the producer price files of the eight categories have been completed with the commodity structure of the Public Sector expenditures by province which represents the consumption in each province. These commodities could be either from domestic production or imports from other countries.

One of the objectives of this study is to identify the import content of the public sector expenditures. This refers to direct imports only. Actual data on commodity imports of the public sector are not readily available and it is assumed that the import content of the public sector purchases would be similar to that of the total economy for any commodity. By using this assumption and by applying the 1979 import coefficients(16), of the input-output system, each commodity purchased by the public sector has been broken down into import share and domestic production. The imports by province estimated by this method represent only the imports from abroad and not imports from other provinces.

By substracting the estimated imports from the total purchases of each commodity, the purchases of domestic origin (i.e. domestic production within Canada) have been derived. Thus, for the 8 category framework, we have generated commodity tabulations for (a) the total of both domestic production and imports (b) imports and (c) domestic production.

---

(16) Import coefficient for each commodity is calculated as follows: Imports divided by "Use" where "Use" in this case equals consumption by domestic industries for intermediate purposes, final use by Households, Government, Business for capital formation and additions to inventories and for re-exports.

(4) Purchases from Domestic Production

The term "domestic production" used here represents total production within Canada (irrespective of the province). The commodity purchases by province from domestic production do not necessarily represent the production within that province as they represent only the consumption which could be supplied either from that province or other provinces but not from abroad.

It should be recalled that an objective of this study is to identify the industries which benefit from the public sector purchases. In order to achieve this objective, we have used the market share assumption of the input-output system and converted the commodities into industries which produced them by applying the output matrix of 1979(17).

Thus, by this exercise the industrial distribution of the commodities purchased by the public sector has been obtained by province for the 8 category framework.

(17) Each column of the output matrix shows the distribution by commodity of the output of an industry.
